* Current "non-recyclables" waste generation rates typically include food waste that might be further separated for composting.

Construction Design (All Types of Developments)

Outline how measures for waste avoidance have been incorporated into the design, material purchasing and construction techniques of the development (refer to Section 3.2 7.2.14 of the DCP):

Materials THE USE OF STANDARD, GENERIC SIZE BUILDING MATERIALS HELPS TO ELIMINATE EXCESSIVE WASTE HENCE BUILDING PRODUCTS ARE ORDERED MORE ACCURATELY. CONSTRUCTION TECHNIQUES TO BE USED TO MINIMISE WASTE ON SITE.

Lifecycle THE OBJECT TOWARDS DESIGN SOLUTIONS IS TO ENSURE EACH BUILDING PRODUCT HAS A HIGH LEVEL OF QUALITY HENCE TO ACHIEVE LONGEVITY OF ITS LIFESPAN.

Detail the appropriate needs for the ongoing use of waste facilities including the transfer of waste between the residents or business units. The siting of waste location and frequency of waste transfer and collection. If truck access is required then engineering details are required.

THE OCCUPANTS ARE TO MANAGE THEIR WASTE ON A DAILY BASIS, SEPARATING MATERIALS INTO GARDEN ORGANICS, RECYCLING AND WASTE AND PLACING INTO APPROPRIATE COUNCIL PROVIDED BINS STORED IN A SAFE PLACE.

THESE BINS ARE TO BE PUT OUT FOR KARBESIDE COLLECTION BY COUNCIL ON THE SPECIFIED DAYS.
